### Quiz, 10 questions

Yes! The digitalization of our society has played a huge role in this.

Deep learning has resulted in significant improvements in important applications such as online advertising, speech recognition, and image recognition.

## Correct

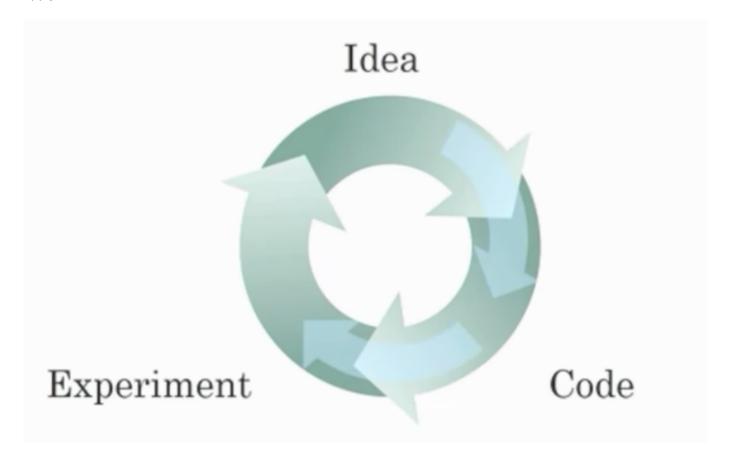

These were all examples discussed in lecture 3.

1/1 point

3

Recall this diagram of iterating over different ML ideas. Which of the statements below are true? (Check all that apply.)

Being able to try out ideas quickly allows deep learning engineers to iterate more quickly.

#### Correct

Yes, as discussed in Lecture 4.

12/21/2018	Neural Networks and Deep Learning - Home   Coursera
Introd	Faster computation can help speed up how long a team takes to iterate to a good idea. $uction\ to\ deep\ learning$
Quiz, 10014	gstions
Yes,	as discussed in Lecture 4.
	It is faster to train on a big dataset than a small dataset.
Un-se	elected is correct
	Recent progress in deep learning algorithms has allowed us to train good models faster (even without changing the CPU/GPU hardware).
<b>Corre</b> Yes. train	For example, we discussed how switching from sigmoid to ReLU activation functions allows faster

4.	
proble	an experienced deep learning engineer works on a new problem, they can usually use insight from previous ms to train a good model on the first try, without needing to iterate multiple times through different s. True/False?
0	True
No. I	should not be selected Finding the characteristics of a model is key to have good performance. Although experience can help, quires multiple iterations to build a good model.
	False
	1/1
5.	point
	one of these plots represents a ReLU activation function?
	Figure 1:

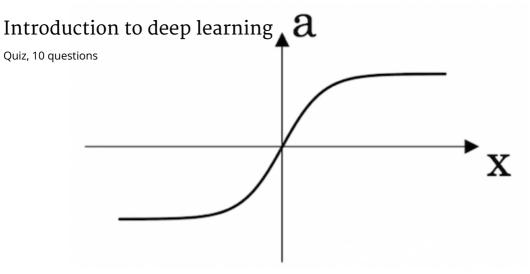

Figure 2:

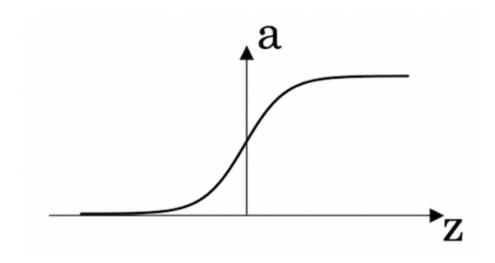

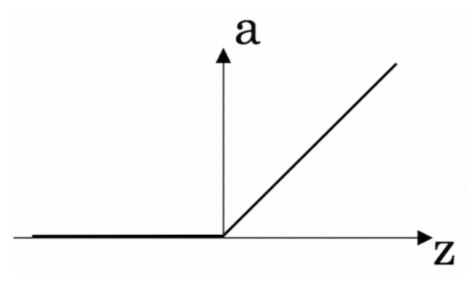

Figure 3:

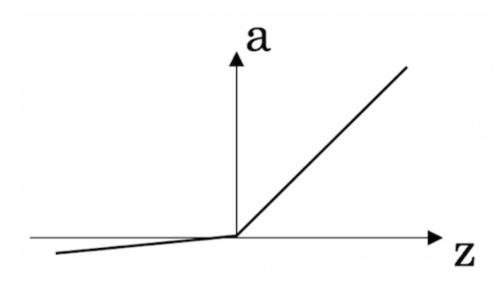

# Introduction to deep learning

Quiz, 10 questions

Correct! This is the ReLU activation function, the most used in neural networks.

Figure 4:

1/1 point

6.

Images for cat recognition is an example of "structured" data, because it is represented as a structured array in a computer. True/False?

True

#### Correct

Yes. Images for cat recognition is an example of "unstructured" data.

1/1 point

7.

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of "unstructured" data because it contains data coming from different sources. True/False?

Introduction to deep learning

		1 0	Falco
Quiz,	10	ques	eals:

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of "structured" data by opposition to image, audio or text datasets.

1/1 point

8.

Why is an RNN (Recurrent Neural Network) used for machine translation, say translating English to French? (Check all that apply.)

It can be trained as a supervised learning problem.
<b>Correct</b> Yes. We can train it on many pairs of sentences x (English) and y (French).
It is strictly more powerful than a Convolutional Neural Network (CNN).
Un-selected is correct
It is applicable when the input/output is a sequence (e.g., a sequence of words).
Correct Yes. An RNN can map from a sequence of english words to a sequence of french words
RNNs represent the recurrent process of Idea->Code->Experiment->Idea->

1/1 point

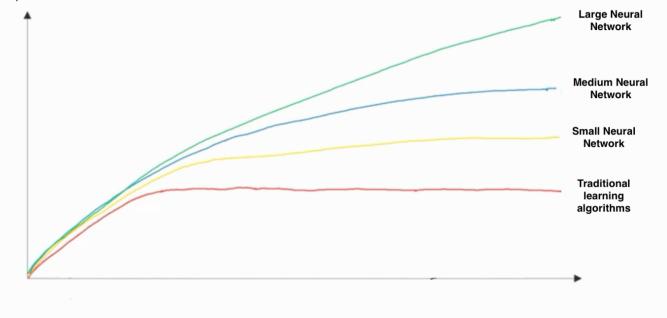

**Un-selected is correct** 

9.

In this diagram which we hand-drew in lecture, what do the horizontal axis (x-axis) and vertical axis (y-axis)

# Introduction to deep learning

•	x-axis is	the	input to	the a	algorithm
-	V-0VI2 I2	UIC	iliput to	י נווכ נ	aigoriumi

- y-axis is outputs.
- x-axis is the performance of the algorithm
  - y-axis (vertical axis) is the amount of data.
- x-axis is the amount of data
  - y-axis (vertical axis) is the performance of the algorithm.

#### Correct

x-axis is the amount of data

• y-axis is the size of the model you train.

1/1 point

10.

Assuming the trends described in the previous question's figure are accurate (and hoping you got the axis labels right), which of the following are true? (Check all that apply.)

Increasing the training set size generally does not hurt an algorithm's performance, and it may help  $Introduction deep \ learning$ 

Ouiz	10	auestions

Yes. Bringing more data to a model is almost always beneficial.  Increasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.  Correct  Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct	Quiz, 10 questions
Increasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.  Correct  Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	Correct
Correct Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	Yes. Bringing more data to a model is almost always beneficial.
Correct Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Correct Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Correct Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	help significantly.
Yes. According to the trends in the figure above, big networks usually perform better than small networks.  Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Decreasing the training set size generally does not hurt an algorithm's performance, and it may help significantly.  Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	res. According to the trends in the figure above, big networks usually perform better than small networks.
Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	Decreasing the training set size generally does not hurt an algorithm's performance, and it may help
Un-selected is correct  Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	
Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may help significantly.	Un selected is correct
help significantly.	Oli-Selected is correct
help significantly.	
help significantly.	Decreasing the size of a neural network generally does not hurt an algorithm's performance, and it may
